Find and use slide deck templates

Who can use this feature

Available on any plan

Slide deck templates provide curated colors, fonts, and slide layouts to help you build presentations faster while maintaining a consistent look and feel. Browse through available slide layouts to find one that fits your needs, such as a title or an image, then replace the placeholder elements with your own content. Unlike many presentation tools, you're not limited to one template per deck. You can mix and match slide layouts from different templates to customize your deck exactly how you want.

When you add a slide layout from a template to your deck, the template's color and font styles also become available for you to use. Apply these styles to any slide in your deck to keep your presentation looking cohesive.

Want to create your own templates? Users on paid plans can create and publish templates to their team or organization.

Add a template to your deck

There are a couple of ways to create a slide deck using templates.

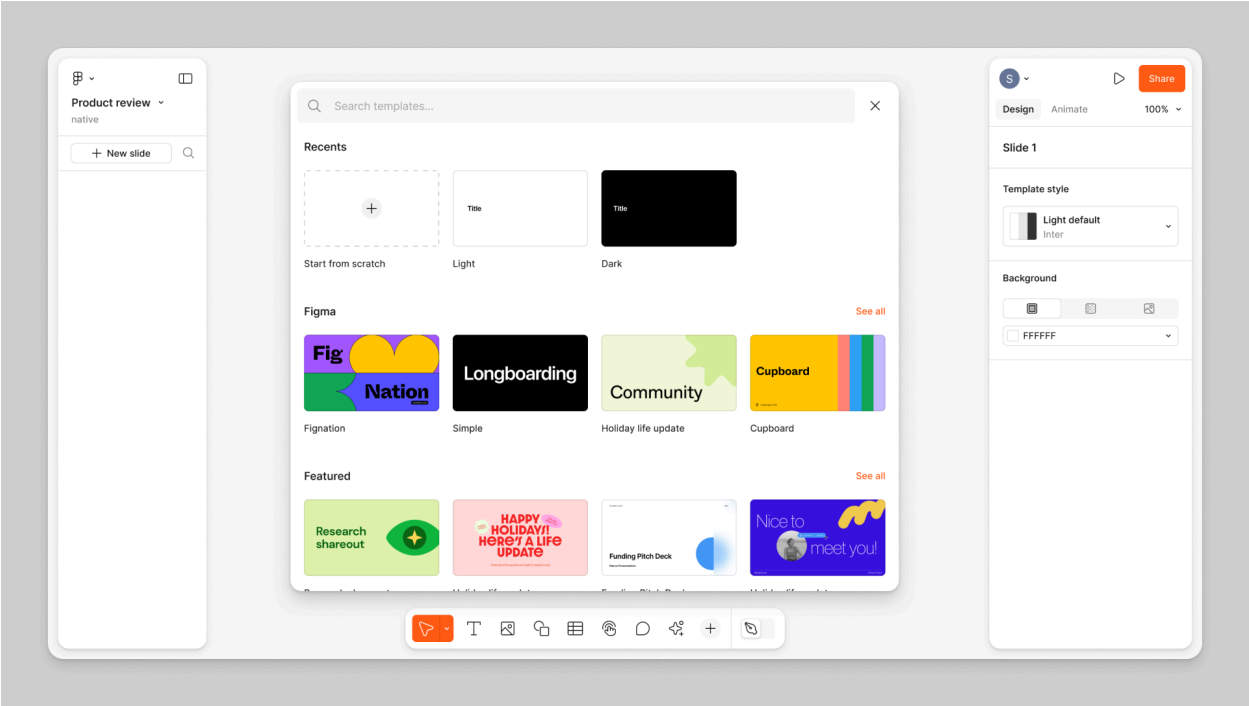
From **Templates and tools**:

1. From the file browser, click **Templates and tools** in the left sidebar.
2. Select a template from **Community** or your internal team's tab. Slide deck templates are categorized under **Presentations**.
3. Click **Use template**. If prompted, select the account where you want to open the template.
4. A new slide deck opens in your drafts. Use the template picker to choose a specific slide layout or click **Add all slides**. Learn more about using slide deck templates.

From the template picker:

Use the template picker to browse for and add templates to your deck.

1. Click **New slide** in the left sidebar.
2. Browse through templates by category or use the search field to narrow down the choices.
3. Click on a template to view the available slide layouts.
4. Click on a slide layout to add it to a new slide in your deck or click **Add all slides** to add every slide layout in the template. You can add as many slide layouts from different templates as you want.



Note: You can also [find slide deck templates](#) on the Figma Community.

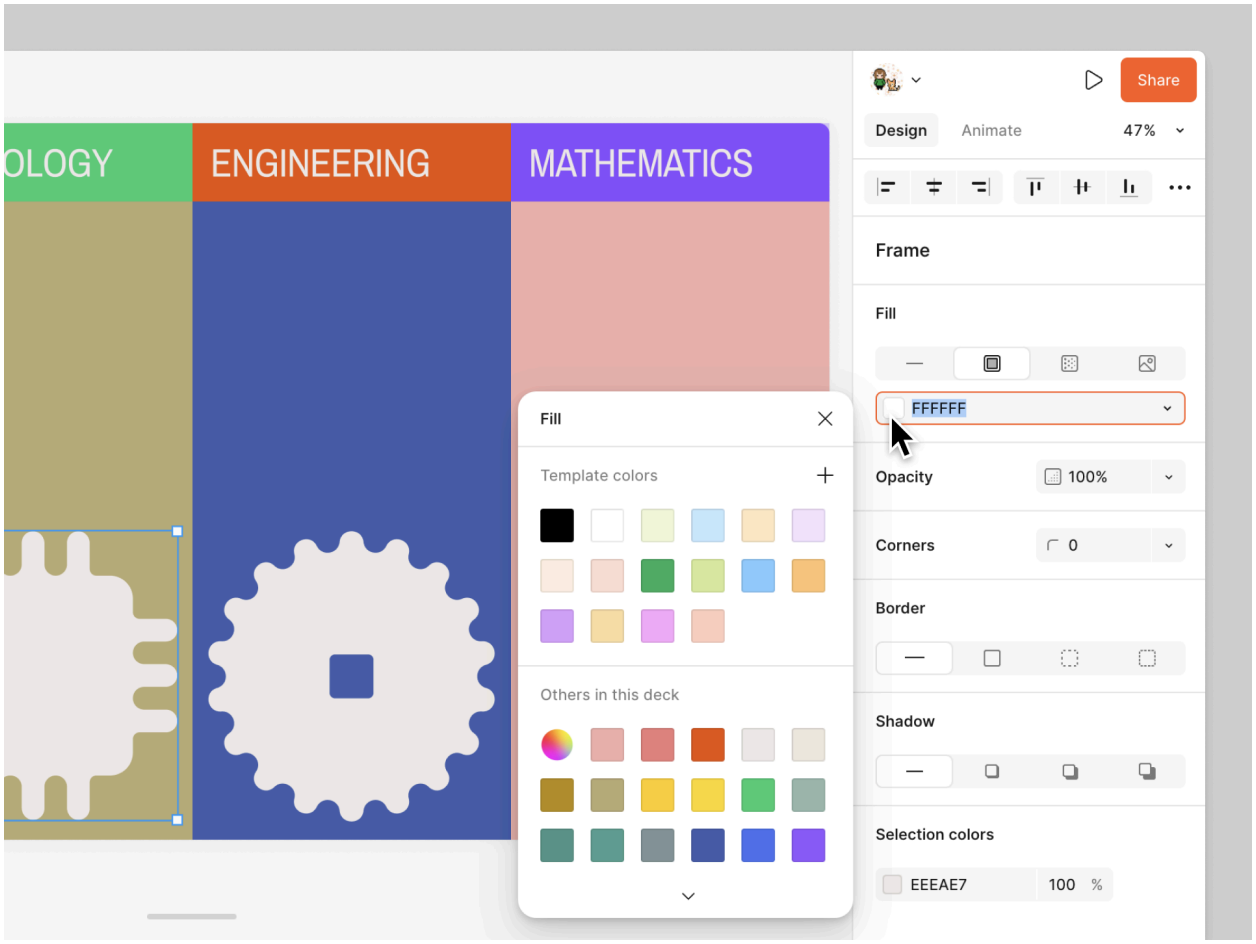
Use template styles

When you add a template to your deck, you can apply the template's color and text styles to any object or slide using the **Template style** section in the right sidebar.

Apply a template color style

You can apply a template's color styles to any object with a fill, such as shapes or text layers. You can also apply template colors to the [background of a slide](#).

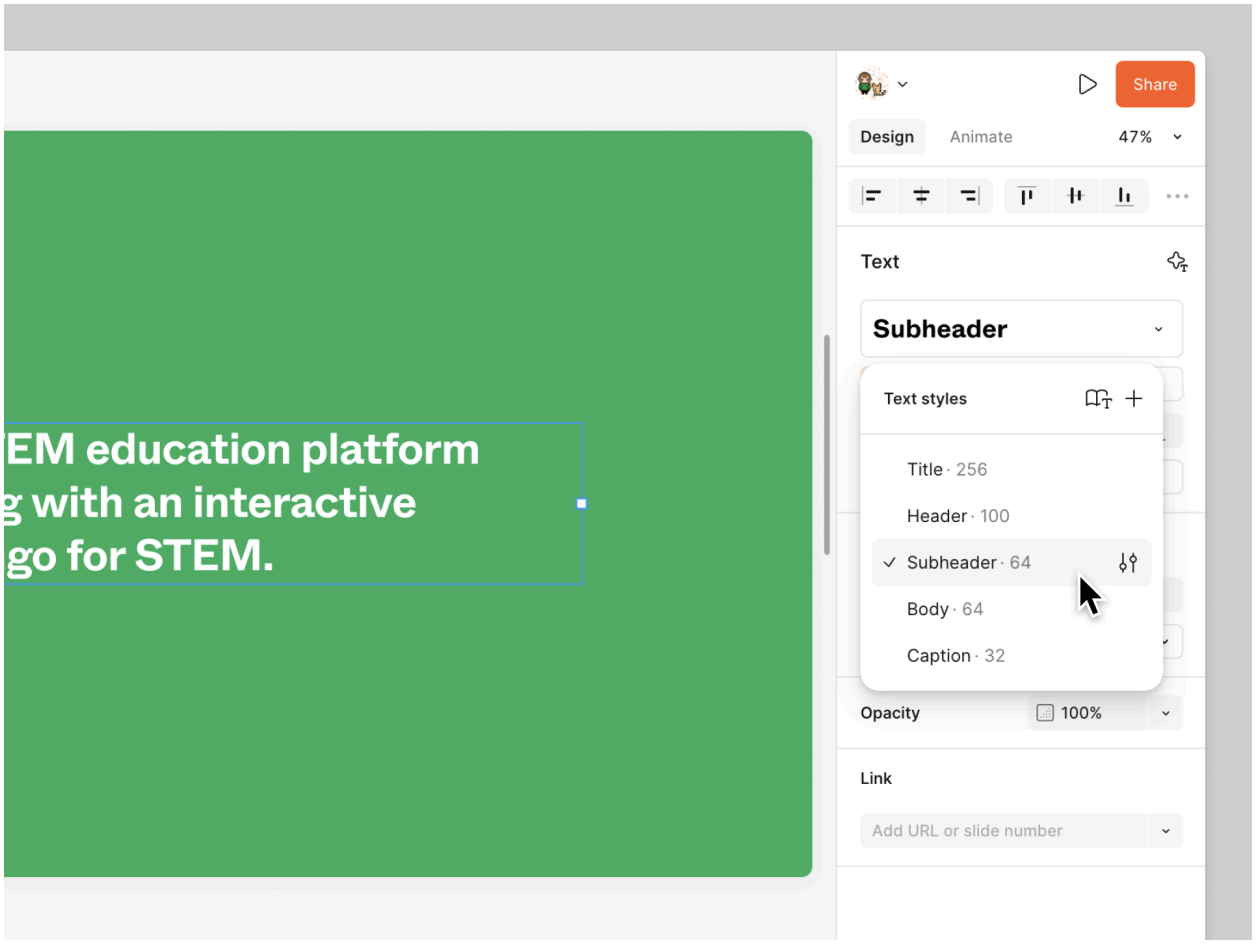
1. Select the object you want to update.
2. Open the dropdown menu in the **Fill** section of the right sidebar.
3. Under Template colors, select a color to use as the object's fill.



Apply a template text style

You can apply template text styles to any text layer on a slide.

1. Select the text layer you want to update.
2. Open the dropdown menu in the **Text** section of the right sidebar.
3. Under Text styles, choose the style you want to apply.



Change the template style on an entire slide

If you add slide layouts from multiple templates to your deck, you can change the template style on an existing slide by selecting a different template from the dropdown menu. This changes the text styles and color fills on the current slide.

1. Select the slide you want to update.
2. Open the **Template style** dropdown in the right sidebar and choose the template you want to use.

Objects using the previous template's font and color styles are updated to use the newly selected template's styles.

Remix template colors

You can shuffle through a template's color styles to see how different color combinations look on the current slide.

1. Select the slide you want to update.
2. Click **Remix template colors** next to the template name.

Note: In order to remix template colors, the currently selected slide must have at least one object that uses a template color as its fill.

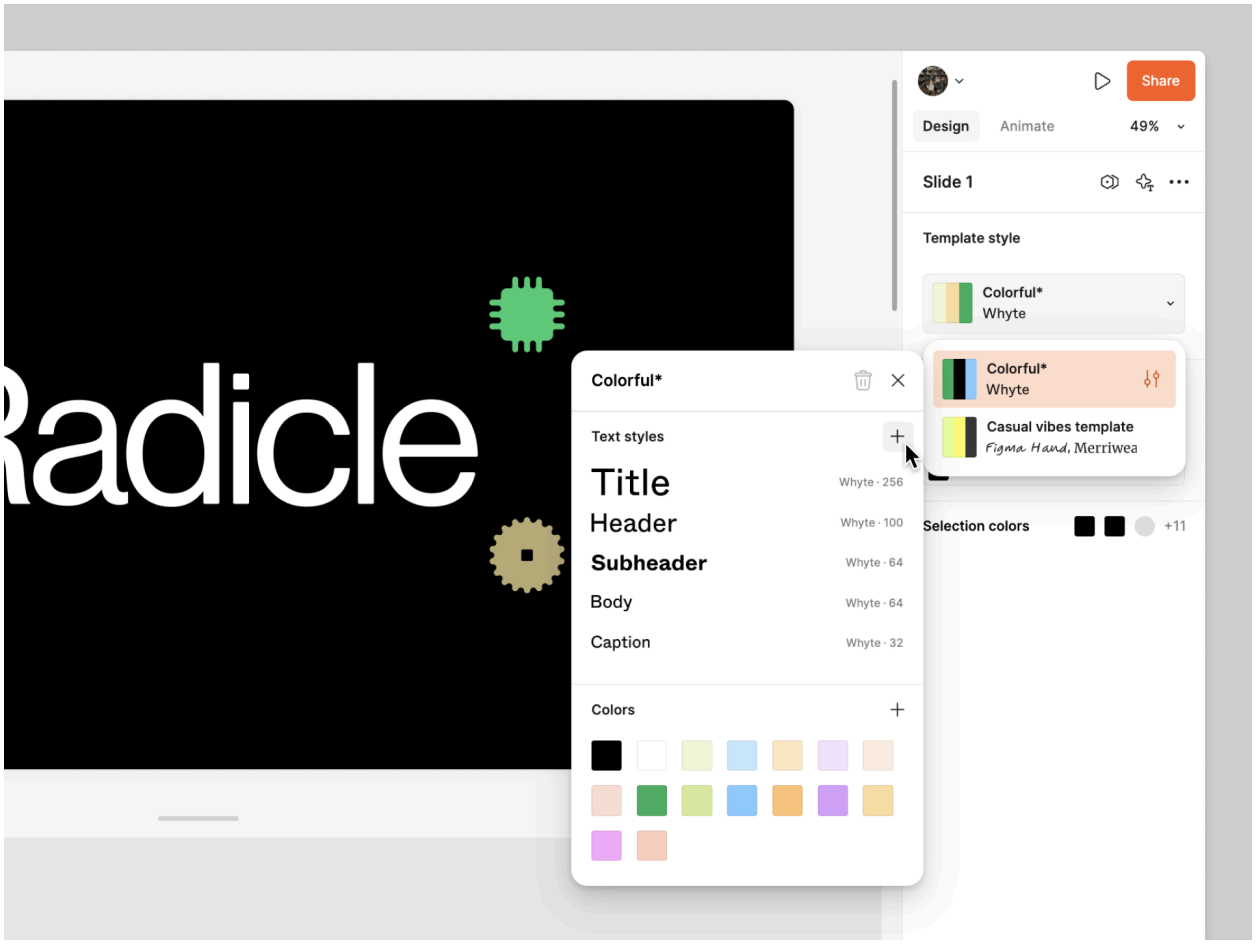
Manage template styles

Add template colors and font styles

You can add new color or text styles to existing template styles.

To add a new color or text style:

1. Open the **Template style** dropdown in the right sidebar.
2. Click **Edit template style** next to the template you want to update.
3. Do one of the following:
    - **To add a text style:** Click the plus next to Text styles and use the **Edit text style** modal to configure the style's properties
    - **To add a color style:** Click the plus next to Colors and use the color picker to select a new color



Update template color and text styles

You can edit existing template color and text styles. When you update a style, the change is automatically applied to every object currently using the style.

To edit a template's color or text styles:

1. Open the **Template style** dropdown in the right sidebar.
2. Click **Edit template style** next to the template you want to update.
3. Do one of the following:
    - **To update a text style:** Select the text style and use the **Edit text style** modal to modify its name or properties.
    - **To update a color style:** Hover over the color style and click **Edit**. Use the color picker to select a new color or choose an option from a connected library.

Rename a template style

If you use multiple templates in a deck, it may be helpful to rename template styles to keep things organized in your deck.

Note: Renaming a template style will only impact your current deck. It will not rename the original template and the new name will not persist if you use the same template in another deck.

To rename a template style:

1. Open the **Template style** dropdown in the right sidebar.
2. Click **Edit template style** next to the template you want to update.
3. Click **More options**.
4. Enter a new name in the **Name** field and press Enter.

Delete a template style

If you no longer want to use a template in your deck, you can remove it from the **Template styles** dropdown menu.

To delete a template style:

1. Open the **Template style** dropdown in the right sidebar.
2. Click **Edit template style** next to the template you want to update.
3. Click **More options**.
4. Click **Remove style from deck**.

Note: Template styles can only be removed if they aren't being used on an existing slide.

Publish slide deck templates to a team or organization

Who can use this feature

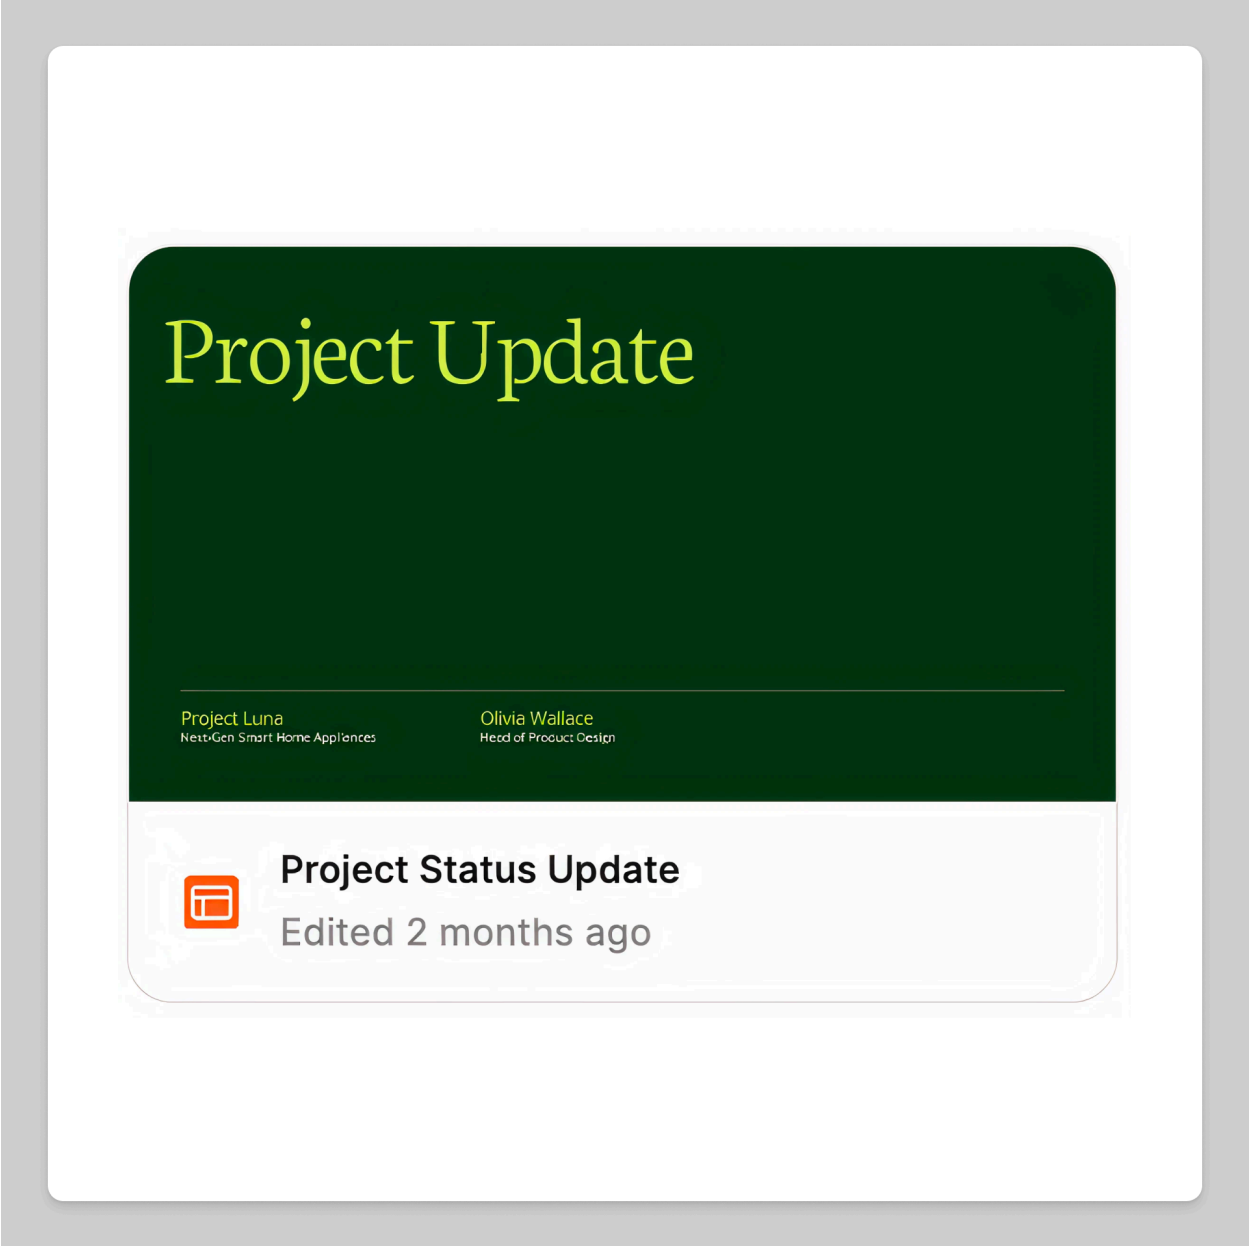
Available on [any paid plan]

Professional plan users are limited to publishing five templates per team

Anyone with `can edit` access to a slide deck can publish it as a template

Create custom slide deck templates and publish them to your team or organization.

You can identify published templates by the orange template icon in the file browser. To help find and manage your custom templates, we recommend keeping them in one project. Learn more about [projects](#).



About published template permissions

Publish templates to a team

After you're done drafting your template, you'll need to move it to a project within a team before publishing. You can only publish a template to the team where the template's source file currently lives. If you want the template to be available in another team, you can either move the file to that team or save a copy of the file to your computer and import it to the team before publishing.

Note: Professional plan users are limited to publishing five templates per team.

Keep in mind that team and project sharing permissions impact who can access published templates. Users must be members of the team and have permission to access the project where the template is published. If the template is in a project set to **Only invited people can access**, only team members invited to the project will be able to access the template. If members of your team are unable to find published templates, you may need to modify the project's permission settings. Learn moreabout managing project permissions.

Publish templates to an organization

Organization and Enterprise plan users can also publish templates to an organization. If the template source file's sharing permissions are too restrictive, Figma Slides will automatically update them when you publish the template.

For example, if the file is set to **Only invited people can access** and you choose to publish the template to an organization, Figma Slides will update the file's permissions to give organization members access to the file.

Keep in mind that changing the file's sharing permissions in the future may result in organization members losing access to the template.

Publish a template

1. Open the slide deck you want to publish as a template.
2. Click **Share** in the right sidebar to open the Share modal.
3. Click **Publish template**. If the slide deck is in your drafts, you'll be prompted to move it to a project.
4. If your template has more than one template style, select which style you want to use for your template. Published templates can only have one template style. Learn more about template styles.
5. Enter a name, description, and optional custom thumbnail for your template.
6. Choose to publish the template to either your current team or your entire organization.
7. Click **Publish**.

Edit a published template

1. Open the original slide deck template.
2. Make your changes to the template.
3. Click **Publish changes** on the banner at the top of the page.
4. Edit the template details, then click **Publish updates**.

Published changes only apply to new slide decks that are made with the template.

Unpublish a template

1. Open the original slide deck template.
2. Click on the dropdown menu next to the file name.
3. Hover over **Manage template** and select **Unpublish template**.
4. Click **Unpublish** to confirm.

The template will no longer appear in the template picker for your team or organization. Existing slides that use the template will not be impacted but new slides cannot be added from the template.

Note: Moving the original slide deck template back to your drafts will also unpublish the template.

Disable custom templates

Organization admins can prevent members from publishing custom templates.

1. Open the file browser.
2. Select **Admin** in the sidebar.
3. Select the **Settings** tab.
4. Scroll down to the **Other** section, then turn off the **Template publishing** toggle.

Custom slide deck templates created in your organization will no longer be displayed in the template picker. If you decide to re-enable custom templates, previously created templates will be restored to the template picker.
